About

Research Engineer with expertise in High-Performance Computing (HPC), AI, and Data Analytics, with a growing interest in product management. Skilled in software development, training, and fostering collaboration between academia, industry, and government.

Work Experience

European University Cyprus (EUC)

Scientific Colaborator

Nicosia, Cyprus

Feb 2024 – today

- Lecturer at undergraduate courses for Computer Science and Electrical Engineering.
- Taught Programming Languages, (Advanced) Computer Architecture, Parallel Computing and Compiler Design.

The Cyprus Institute (Cyl)

Research Engineer

Nicosia, Cyprus

June 2023 – today

- Part of the Engineering Team for EuroCC2 project aiming to bridge the gap between academia, industry and government in the areas of HPC, AI and HPDA.
- Working on various Proof of Concept (PoC) projects such as automating the process of performance evaluation of HPC systems and online optimization problems based on changing data.
- Task Leader for Training and Skills Development, leading the efforts in upskilling the local community in the areas of HPC, AI and HPDA.
- Served as the Task Leader for Collaboration, acting as the interface between NCC Cyprus and other European entities.
- Leading the outreach effort for the creation of Zephyr, a mini HPC cluster made of Raspberry Pi boards, to broaden the understanding and promote the use of HPC in the local community of Cyprus.
- Utilised agile methodologies to manage tasks and develop PoC projects effectively, demonstrating experience in product management principles and iterative development.
- One-on-one training in product management provided by my line manager, gaining valuable insights into agile development processes and best practices.

Cyl

HPC Intern

Nicosia, Cyprus

July 2022 – Aug 2022

- Researched the feasibility of using generic device function pointers in CUDA kernels.
- Familiarized with PTX ISA and CUDA's JIT functionality.
- Explored how the above functionality could be packaged and deployed as a Python library.

Cyl

HPC Intern

Nicosia, Cyprus

Mar 2021 – Sep 2021

- Worked as part of the Lattice QCD group in CaSToRC.
- Implemented parallel IO functionality for an open-source project (Lynx-API).
- The implementation supports multiple backends (MPI-IO, Dask, HDF5) and was written in Python.

EPCC

Teaching Assistant - Demonstrator

Edinburgh, UK

Oct 2019 – Sep 2022

- o Acting as lab demonstrator for MSc courses in HPC and Data Science offered by EPCC.
- o Examples of courses are Numerical Algorithms for HPC, Advanced Message-passing Programming, Advanced Parallel Techniques, Data Analytics with HPC.

Felcana

Software Developer Intern

London, UK

Oct 2017 – Dec 2017

- o Learned software engineering process improvements and best practices.
- o Responsible for researching and implementing various algorithms, such as moving averages and compression, to be used in the IoT devices designed by the start-up.

National Guard Of Cyprus

Second Lieutenant

Nicosia, Cyprus

2012–2014

Education

University of Edinburgh, School of Informatics, EPCC

PhD in HPC, Computational & Data Science, Software Engineering

Edinburgh, UK

2019–2024

- o Optimizing sparse linear algebra through automatic sparse matrix storage format selection and dynamic switching on heterogeneous hardware.
- o Developer and maintainer of Morpheus, a C++ library for efficient runtime sparse matrix format format switching and selection.
- o Funded as part of the ASiMoV, a project jointly led by EPCC and Rolls-Royce, and includes the Universities of Bristol, Cambridge, Oxford and Warwick.

University of Edinburgh, School of Informatics, EPCC

MSc High Performance Computing with Data Science, Distinction

Edinburgh, UK

2018–2019

- o Obtained an all-around knowledge in HPC and Data Science.
- o Extensively used MPI and OpenMP for Distributed and Shared Memory parallelism.
- o Performed optimisations using compiler directives/flags and code refactoring in C.
- o Experimented with non-deterministic messaging, through active messages and callbacks.

Imperial College London

MEng Electrical & Electronic Engineering w/ Management, 2:1

London, UK

2014–2018

- o **Relevant Courses:** Digital System Design ▪ Embedded Systems ▪ Real-Time DSP ▪ Optimisation
- o **Relevant Coursework:**
 - Thread safe firmware for precision control of brush-less motor using C.
 - Real-time speech enhancement based on spectral estimation using C.
 - Accelerating computationally intensive mathematical expressions using FPGAs.

Kykkos A' Lyceum

Secondary Education, GPA: 19.75/20

Nicosia, Cyprus

2009–2012

Projects

Accelerating MCMC on multiple GPUs

MSc Thesis

Supervisor: Dr Kevin Stratford

- o Continuation of the MEng Thesis, extending support for multiple GPUs.
- o The main goal of the project was to extend the Metropolis-Hastings algorithm to target multiple

GPUs at a distributed environment whilst at the same time maintaining a single source code.

- The end result was a performance portable three-level hierarchical model of MPI-OpenMP-OpenACC written in C, to target multiple GPUs across multiple compute nodes.

Student Cluster Competition

- Annual competition between teams of students from different universities, part of the International Supercomputing Conference(ISC)
- Each team was responsible to design and build their supercomputing cluster and optimise certain applications based on their choice of hardware.
- Was responsible for optimising CP2K and SWIFT codes as well as assisting in the software configuration and installation on the cluster.

Accelerating MCMC on GPU

MEng Thesis

Supervisor: Dr Christos-Savvas Bouganis

- The project tackles the modern issues of Markov Chain Monte Carlo implementations occurring by the adoption of Big Data and complex Bayesian models by investigating ways to accelerate them using modern GPUs.
- Metropolis-Hastings algorithm was mapped on GPU to perform a binary classification problem using logistic regression on large datasets unable to fit on the available memory.

Skills

Programming Languages: C, C++ , Python, Bash

Programming Models: MPI+X ▪ OpenMP ▪ CUDA/HIP ▪ OpenACC ▪ Kokkos

Tools/Methods: Make, CMake ▪ git ▪ Unit Testing (CUnit, gTest) ▪ CI (GitHub Actions)

Languages: English (fluent) ▪ Greek (native)

Tutorials & Presentations

- "Optimize Your Code: Intro to Profiling for HPC & AI Applications", *Tutorial*, Nicosia, Cyprus, December 2024.
- "Supercomputing for All: Getting Started with HPC & AI Resources", *Tutorial*, Nicosia, Cyprus, November 2024.
- "Accelerating Generative AI with PyTorch", *Tutorial*, in *ISC-HPC 2024*, Hamburg, Germany, May 2024.
- "Enhance Your Presentation Skills with your Personal AI Assistant", *Presentation*, in *Optimize your workflow with AI* EuroCC2 Event, Nicosia, Cyprus, December 2023.
- "Kokkos Framework", *Presentation*, in *Emerging trends in generative artificial intelligence, data analytics, and high-performance computing* EuroCC2 Event, Limassol, Cyprus, September 2023.
- "Optimizing Sparse Linear Algebra Through Automatic Format Selection and Machine Learning", *Presentation*, in *2023 IEEE International Parallel and Distributed Processing Symposium Workshops (IPDPSW)*, St. Petersburg, FL, USA.
- "Morpheus unleashed: Fast cross-platform SpMV on emerging architectures", *Presentation*, in *2023 Cray User Group conference*, Helsinki, Finland, 2023
- "Exploiting dynamic sparse matrices for performance portable linear algebra operations", *Presentation* in *2022 IEEE/ACM International Workshop on Performance, Portability and Productivity in HPC (P3HPC)*, Dallas, TX, USA, 2022.

Participations

1. The International High-Performance Computing Summer School, Athens, Greece, June, 2022.
2. Student Cluster Competition at ISC19, Frankfurt, Germany, June, 2019.

Achievements

1. Programming challenge winner for the Fastest CPU code – The International High Performance Computing Summer School, Athens, June 2022.
2. 1st Pan-Cyprian Prize, Research by Students competition, Nicosia, Cyprus, May 2012
3. 1st Pan-European Prize, Energy Scouts Competition, Nicosia, Cyprus, May 2009

Publications

1. Hadjigeorgiou, A. et al., "An approach to performance portability through generic programming", in *Euro-Par 2023: Parallel Processing Workshops*, Limassol, Cyprus, 2023 (accepted)
2. Stylianou, C., and Weiland, M., "Optimizing Sparse Linear Algebra Through Automatic Format Selection and Machine Learning", in *2023 IEEE International Parallel and Distributed Processing Symposium Workshops (IPDPSW)*, St. Petersburg, FL, USA, 2023

Scholarships & Awards

2020: A.G. Leventis Foundation Educational Grant

2020: Scholarship for Doctoral Studies - State Scholarships Foundation of Cyprus

2019: PhD Stipend as part of the EPSRC project ASiMoV (EP/S005072/1).

2012: Scholarship for Undergraduate Studies - State Scholarships Foundation of Cyprus
